(54) Title: METHOD END DEVICE FOR SOURCE DECODING A VARIABLE-LENGTH SOFT-INPUT CODEWORDS-SEQUENCE

(57) Abstract: The invention concerns a method for source decoding a variable-length soft-input codewords sequence ( $y [1: T]$ ) into a soft-output bit sequence ( $Lv [1: T]$ ), the variable-length soft-input input codewords sequence ( $y [1: T]$ ) encoded in accordance with a VLC codewords table. It comprises a first stage (100) of implementing a stack decoding algorithm for a sequential estimation of an hard-output bit sequence of said variable length soft-input codewords sequence, including storage of intermediate data contained in the stack and generated by the stack decoding algorithm; and a second subsequent stage (102) of post-processing the stored intermediate data for generating the soft-output bit sequence ( $Lv [1: T]$ ), a soft-output ( $L(x [t])$ ) being provided for each bit.
